 AI Forecast Intelligence

Executive Summary

Based on historical GTD records, the AI forecasting model predicts 1288 terrorist incidents in Afghanistan over the selected forecast period.

Current Recorded Attacks : 1414

Forecasted Attacks : 1288

Expected Growth : -8.91%

Threat Trend :  Decreasing

The forecast indicates an overall LOW risk trend. These projections are generated using historical attack data and should be considered as decision-support information for intelligence planning.

 Threat Trend Assessment

 Low Future Risk

Growth Rate

-8.91%

Forecast Trend

 Decreasing

 Strategic Recommendations

- ✓ Continue routine monitoring
- ✓ Maintain intelligence sharing
- ✓ Protect critical infrastructure
- ✓ Review security policies periodically
